DETAILED ACTION

Response to Arguments

Because Udagawa '781 does not qualify as prior art, this action is Non-Final.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 1. Claims 3, 5, 7, 9, 13, 15, 17, 35 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Tanaka et al (HDTV Single-chip CCD Color Camera).

Regarding claim 3, Tanaka discloses an image pickup device comprising color filters arrays (see figure 6), a plurality of pixels (see section 4-1 where the 2-million-pixel CCD is discussed), a plurality of vertical read-out units (see section 4-1 where the V-

Application/Control Number: 08/994,642

Art Unit: 2612

CCD is discussed), a horizontal read-out unit (see section 4-1 where the H-CCD), an output unit (inherent feature) and control means (see figure 1 where the control unit is arranged to divide the plurality of pixels on a unit basis of a predetermined number of lines which includes a plurality of first lines and to add the signals of pixels of the plurality of second lines in order to control pixels of the predetermined number of lines so as to generate one kind of color difference signal) (also see section 2. Conventional Color Coding Method, where the color difference signals- R-Y and B-Y- are discussed).

Regarding claim 5, Tanaka discloses the signal charges of two predetermined pixels being added and an image signal corresponding to the added signal charges being outputted from the output unit (see figure 1).

Regarding claim 7, Tanaka discloses adding signal charges of two pixels with signal charges of two predetermined pixels in the diagonal direction (see figure 5).

Regarding claim 9, Tanaka discloses combining a method of adding signal charges in the vertical direction and further adding them with signal charges in the diagonal direction and further adding signal charges in the vertical direction (see Fig. 1 where the added combinations of, "(Mg + Ye)," in the vertical direction and, "(G + Cy)," in the diagonal direction are further added to signal charges in the vertical direction, "(G + Ye)").

Regarding claim 13, Tanaka discloses the combination of two predetermined pixels of yellow and green and cyan and magenta (see figure 1).

Regarding claims 15 and 17, see claim 13 above.

Application/Control Number: 08/994,642

Art Unit: 2612

Regarding claim 35, Tanaka discloses an image pickup device where the control means effects the control of the pixels so as to generate alternately different kinds of color difference signals on the predetermined number of lines basis (see section 3 and figure 3 where the color difference signals are discussed/shown).

Regarding claim 36, Tanaka discloses a signal processing circuit which subjects the signals output from the output unit to an image processing and an image display unit (see section 4-4 where the color signal process circuit is discussed and section 5-2 where the reproduced image is discussed).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 19, 21, 23, 25, 29, 31 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka in view of Kotaki (US5907355).

Regarding claims 19, 21 and 29, Tanaka does not expressly disclose electrodes connected to every fourth pixel. Kotaki reveals, in figure 6, that it is well known in the art to utilize a color CCD where the electrodes are connected to every fourth pixel in a vertical direction (see col. 8, lines 26-41 where the read-out of signal charges is discussed). It would have been obvious to one of ordinary skill in the art at the time the

Art Unit: 2612

invention was made to implement Kataki's teachings since a four-phase driver would ultimately decrease charge read-out time.

Regarding claims 23, 25, 31 and 33, Tanaka does not expressly disclose electrodes connected to every fourth pixel. Kotaki reveals, in figure 6, that it is well known in the art to utilize a color CCD where the electrodes are connected to every fourth pixel in a vertical direction (see col. 8, lines 26-41 where the read-out of signal charges is discussed). It would have been obvious to one of ordinary skill in the art at the time the invention was made to implement Kataki's teachings since a four-phase driver would ultimately decrease charge read-out time.

Allowable Subject Matter

1. Claims 1, 2, 4, 6, 8, 10, 14, 16, 18, 20, 22, 24, 26, 30, 32 and 34 are allowed. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rashawn N Tillery whose telephone number is 703-305-0627. The examiner can normally be reached on 9AM-6:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber can be reached on 703-305-4929. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4750.
